

# Tools

Support and optimization of processes

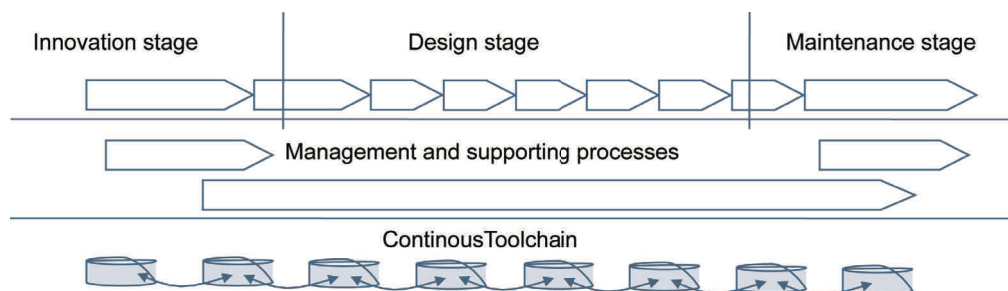

## Evaluation

Using the experience we have gained through previously completed tool evaluations, we have developed a standardized approach which can be individually adapted to meet your needs. In general, our approach is as follows:

- Ascertaining the client's requirements (criteria)
- Converting the criteria into a questionnaire
- Weighting the criteria
- Analyzing the tools that exist on the market
- Evaluating the different tools with the client
- Examining the evaluations, prioritizing the tools
- Cost-benefit analysis for the short-listed tools
- Presenting the results incl. recommendation

## Introduction

We introduce new tools into your organization by working with you. In this context the new tools are first piloted in individual projects/departments, are adapted if necessary, and are only then rolled out throughout the organization. Staff coaching during the introduction and roll-out phases ensures the new tools are accepted more quickly.

## Adaption

We can individually adapt any tools already introduced to meet your needs.

We can also evaluate your tool chain, identify strengths or weaknesses therein, and then optimize the tool chain accordingly.
